

# TriTeq Lock and Security

## TriTeq Keypad Locks

TriTeq custom designed Keypad Locks were created to secure a variety of storage devices. The electronics deliver power to the proprietary TriTeq solenoid or motor drive interfacing with the locking mechanism providing high security and smart internal or external circuitry. TriTeq Keypad Locks are the most effective and economical locks available .

| Keypad 5 MB Lock                        | Keypad 712 SD Lock                           |
|-----------------------------------------|----------------------------------------------|
| • Five Users                            | • 12 Button Keypad                           |
| • 100,000 Code Variations               | • Solenoid or Motor Drive Controlled Opening |
| • External Battery Back Up              | • Master Keyed                               |
| • Membrane Keypad                       | • Carbon circuitry for long life             |
| • Reprogrammable Master Code            | • Easy Front Mounting System                 |
| • Optional Key Over-ride                | • Reprogrammable User Code                   |
| • LED Lighted Keypad Indicators         | • LED Indicators                             |
| • Low Battery Light                     | • External Battery Access                    |
| • Ball Detent Thumb Latch               | • Operates on AA Batteries                   |
| • Field Serviceable                     | • High Security Smart Circuitry Available    |
| • Modular Construction for easy support | • Modular Construction for easy support      |
